

How *VibraLITE*[®] can help with:

MEMORY IMPAIRMENT

It is normal to show some decline in memory due to aging. Difficulty with Memory may also be due to medical problems such as an illness, head trauma, or medication side effects. Many of us simply just have hectic schedules that requires an incredible number of things to be remembered and just need help remembering them.

“VibraLITE” watch is an “aid to memory tool” that is there to help you remember important things as well as little things. It will make dealing with activities of daily living easier. Use this vibration watch to be reminded for appointments, to maintain routines/structure, stay on track, for timing cooking, laundry etc. Be reminded as often as you want, when you need it.

The benefit of vibration alarms allows you to be reminded without alerting anyone else if you wish to select the vibration alarm feature rather than the audible alarm. This vibration alert is perfect for noisy environments when it would be impossible for you to hear a watch audible alarm. (vacuuming, mowing the lawn, using power tools, etc.

Set the Countdown Timer for any amount of time (minutes, seconds, hours) and the Vibrations on the wrist will alert you when the time is up. Using the feature of an auto repeat countdown timer will continue to remind you at your preset interval without resetting but can also be turned off at any time.

Setting alarms for daily reminders is easy. (Examples: Medication times, Appointments, Tasks, Keeping on Schedule etc.). The alarm(s) will alert you each day at your preset times. These alarms can be preset for any reminders during the day that you may need. You no longer will forget to do what has to be done.
